QueueUp 1.0

Feature Sheet

QueueUp 1.0

QueueUp is a gorgeous app designed for quickly adding items to your Netflix queue using your iPhone or iPod Touch. Whether you're out with friends and someone mentions a movie you just have to see, or you're sitting on the couch and think of that great movie you want to stream right now, QueueUp is the app you need to get it done fast .

Find that movie. Search across the entire Netflix catalog and find that hot movie you're looking for. The results will be brought back in a flash and presented with cover art, MPAA rating and average user star rating.

Add Quickly. Once you've got your results, QueueUp lets you add movies and TV shows as simply as tapping the "Add to Queue" button. If a title is available via Netflix's Instant Streaming service, you'll have the option to add it to your Instant Queue.

Get more details. Tapping on a search result will take you to a beautiful details screen which provides a larger cover art image as well as a synopsis of the title. Here you can add the title to the top or bottom of your queue, as well as your instant queue if the title is available for streaming.

Remove. If a search result is already in your queue and you've decided you're no longer interested in watching it, QueueUp will let you remove it with just the tap of a button either in the search results or on the details screen.

Pricing

QueueUp is just $1.99.

System Requirements

QueueUp 1.0 requires an iPhone or iPod Touch running iOS 3.0 or higher.
